Rust-Preventive Bicycle Storage Bag

Protect your investment from the elements while in storage.

What is Zerust®?

Zerust is a VCI (Vapor Corrosion Inhibitor). Our proprietary formulation emits an invisible vapor and settles upon metal surfaces to keep rust and corrosion from forming.

How Zerust® works?

The Zerust® Anti-Corrosive Bicycle Bag contains a proprietary Zerust® VCI (Vapor Corrosion Inhibitor) formulation that is designed to protect Metal surfaces from surface rust/corrosion. When your bicycle is placed inside the Zerust® bicycle bag, the bag begins to emit an invisible, odorless, non-toxic vapor (cleared by the FDA), which diffuses throughout the surrounding atmosphere until the air is saturated. The Zerust® vapor molecules will cling to metal surfaces and protect them from rust and corrosion until the bicycle being protected is removed from the bag. After removal, the Zerust® VCI molecules will automatically vaporize from the bicycle leaving it clean, dry and corrosion free.

How to use your Zerust® Rust-Preventive Bicycle Storage Bag

Once your bicycle has been prepared for storage you can follow these simple steps to make sure your bicycle has maximum protection against rust and corrosion formation while being stored.

- Thoroughly clean and dry your bicycle according to the manufacturers recommendations (check owner's manual).
- Unzip your Zerust® Rust-Preventive Bicycle Storage Bag completely.
- The side with the Zerust® logo imprinted should be facing inward.
- Place your bicycle on the center of the bag.
- Carefully zip the enclosure around the entire bicycle.

Your bicycle is now protected against rust and corrosion during storage.
